Malaysia, in Fulfilment of the Requirements for the Degree of Doctor of
Philosophy**

September 2005

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in
fulfilment of the requirement for the degree of Doctor of Philosophy

**ISOLATION AND IDENTIFICATION OF ANTIMICROBIAL AND CYTOTOXIC
COMPOUNDS FROM *GARCINIA CANTLEYNA* AND *G. NIGROLINEATA***

By

KHALID AHMAD SHAKER SHADID

September 2005

Chairman: Professor Md. Nordin Hj. Lajis, PhD

Institute: Bioscience

Eleven species of *Garcinia* (Guttiferae) from the flora of Malaysia were screened *in vitro* for antimicrobial and cytotoxic activities. Disc diffusion and MTT methods were utilized to screen the antimicrobial and cytotoxic effects, respectively. On the basis of the screening results and literature review of the tested plants, *Garcinia cantleyana* and *Garcinia nigrolineata* were selected for phytochemical investigations.

The investigations of the chloroform extract of *Garcinia cantleyana* by a combination of different chromatographic techniques led to the isolation of eight new natural products: three caged tetraprenylated xanthonoids; cantlyanone A, cantlyanone B and cantlyanone C, four caged triprenylated xanthonoids; cantlyanone D, cantlyanone E, cantlyanone F and cantlyanone G, and 1,4,6,8-tetrahydroxy-5-(2-methylbut-3-en-2-yl)-9*H*-xanthen-9-one (cantleyanaxanthone). Six known compounds namely, glutin-5-en-3 β -ol, a mixture of stigmasterol and

β -sitosterol, guadichaudion H, garbogiol and for the first time in *Garcinia* species the isolation of sesquineolignan (Macranthol).

All caged-polyprenylated xanthonoids were found to exhibit significant cytotoxicity against several cancer cell lines with IC₅₀ values from 0.2-3 μ M. Broth microdilution method was used to determine antibacterial activity for the isolated compounds; the results showed strong antibacterial activity against *staphylococcus aureus* ATCC 335591 for Cantleyanone F with MIC value of 31.25 μ g/ml.

Sesquineolignan (Macranthol) which was isolated for the first time in this genus showed cytotoxic IC₅₀ values of 4.17, 3.70, 1.53, 2.53 μ g/ml against MDA-MB-231, MCF-7, CaOV-3 and HeLa, respectively, and antibacterial activity with an MIC value of 3.91 μ g/ml activity against *staphylococcus aureus* ATCC 335591, the result of which is remarkable.

From the methanolic extract of *Garcinia nigrolineata* leaves, three compounds were isolated, namely a mixture of stigmasterol and β -sitosterol, friedelin, and for the first time methyl putranjivate from *Garcinia nigrolineata*. Bioassays was carried out, but these compounds were inactive against several cell lines.

The structures of all compounds were carried out with the help of chemical and modern spectroscopic techniques (UV, IR, MS, ¹H NMR, ¹³C NMR, DEPT, ¹H-¹H COSY, HMQC, and HMBC).

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**PEMENCILAN DAN PENGENALPASTIAN SEBATIAN-SEBATIAN
SITOTOKSIK DAN ANTIMIKROBIAL DARIPADA *GARCINIA CANTLEYNA*
DAN *G. NIGROLINEATA***

Oleh

KHALID AHMAD SHAKER SHADID

Pengerusi: Profesor Md. Nordin Hj. Lajis, PhD

Institut: Biosains

Sebelas spesies *Garcinia* daripada Malaysia telah dikaji secara *in vitro* untuk menentukan aktiviti-aktiviti antimicrobial dan sitotoksik. Kaedah pembauran cakera dan MTT telah diguna untuk menentukan kesan antimicrobial dan sitotoksik. *G. cantleyana* dan *G. nigrolineata* telah dipilih untuk kajian lebih lanjut berdasarkan keputusan aktiviti-aktiviti biologi dan kajian terdahulu.

Kajian terhadap ekstrak kloroform *G. cantleyana* dengan menggunakan kombinasi berbagai teknik kromatografi yang berbeza telah berjaya memencilkan lapan sebatian semulajadi yang baru: tiga sangkar tetraprenil xanthonoid; kantlianon A, kantlianon B, kantlianon C, empat sangkar triprenil xanthonoid; kantlianon D, kantlianon E, kantlianon F, dan kantlianon G serta kantlianaxanthon. Enam sebatian yang telah diketahui yaitu glutin-5-ena-3 β -ol, campuran stigmasterol dan β -sitosterol, guadicaudion H, garbogiol, dan buat pertama kali dalam spesies *Garcinia* pemencilan seskuineolignan.

Kesemua sangkar poliprenil xanthonoid telah menunjukkan aktiviti sitotoksik yang signifikan terhadap beberapa talian sel dengan nilai 50% perencatan dari 0.2-3 μM . Kaedah “broth microdilution” telah digunakan untuk menentukan aktiviti antibakteria kesemua sebatian yang telah dipencilkan. Katlianon F telah menunjukkan aktiviti antibakteria yang tinggi dengan nilai MIC 31.25 $\mu\text{g/ml}$.

Seskuineolignan telah dipencilkan buat kali pertama dalam genus ini telah menunjukkan aktiviti sitotoksik dengan nilai 50% perencatan 4.17, 3.70, 1.53, 2.53 $\mu\text{g/ml}$ terhadap sel MDA-MB-231, MCF7, CaOV-3, dan HeLa, setiap satu. Sebatian ini juga menunjukkan aktiviti antibakteria terhadap *staphylococcus aureus* ATCC 335591, dengan nilai MIC 3.91 $\mu\text{g/ml}$.

Tiga sebatian berjaya dipencilkan daripada ekstrak methanol daun *G. nigrolineata* iaitu campuran stigmasterol dan β -sitosterol, fridelin, dan metil putranjivat yang buat pertama kali dipencilkan daripada *G. nigrolineata*. Sebatian ini didapati tidak aktif terhadap semua talian sel yang diuji.

Struktur kesemua sebatian telah ditentukan dengan menggunakan teknik kimia dan spektroskopik moden (UV, IR, MS, ^1H NMR, ^{13}C NMR, DEPT, ^1H - ^1H COSY, HMQC, and HMBC).

ACKNOWLEDGEMENTS

All praise to **Allah** most Gracious, Most Merciful, Who, Alone brings forgiveness and light and new life to those who call upon Him; and to Him is the dedication of this thesis.

*“Read! In the Name of your Lord Who has created (all that exist).
He has created man from a clot.
Read! And your Lord as the Most Generous.
Who has taught (the writing) by the pen.
He has taught man that which he knew not.”*
Qur'an 96: 1-5

We praise Allah for His great loving kindness, which has brought us all together to tell and encourage each other and mankind with stories of His care, and leading. In so doing, I also thank to those who answered His call, who have started their journey upon the Straight Path of Allah. All respect for our Holy Prophet (Peace be upon him), who guided us to identify our creator

I am whole-heartedly thankful to my research supervisor, Prof. Dr. Md. Nordin Haji Lajis, Head of the Laboratory of Natural Products, institute of Bioscience for his encouragement, exceptional ideas, and tireless optimism that have kept me going, and for providing the excellent facilities for my work.

I am thankful to Prof. Dr. Abdul Manaf, who kindly guided me into the 'Wonderland of Animal Cell Cultures' and for being positive and encouraging about my research.

My thanks are extended to Associate Professor Dr. Daud Ahmad, who has encouraged me to persevere with the biological assays despite the initial undesirable results, and to Prof Dr. Ahmad Sazali, for his keen interest precious attention and guidance.

I am also thankful to Associate Professor Dr Khozirah shaari, for her kindness, valuable suggestions and persistent help in the field of NMR. I have learned so much from her.

Sincere thanks are due to my colleagues at the Laboratory of Natural Products, Drs. Rohaya, Faridah, Koushik, Dharma, and Habsah, Suryati, and Maulidiani who have made the period when I worked on the thesis very inspiring.

In addition, I am grateful to science officers, Din, Zurina, Mazina, Abby and Julia, all of you have been so helpful. Special thanks to Shamsul for getting me samples of plant material. Many thanks to Normah, who helped with bioassays, thank you so much.

Finally, my warmest thanks are due to my to my family – parents Ahmad Shaker Shadid and Nehal Shadid, brother Nader, sisters Neda'a and Sana'a as well as my wife Ihsan Mkhaimar – for their love understanding encouragement and never failing support during all these years.

KHALID AHMAD SHAKER SHADID
June 2005

I certify that an Examination Committee met on 27th September 2005 to conduct the final examination of Khalid Ahmad Shaker Shadid on his Doctor of Philosophy thesis entitled "Isolation and Identification of Antimicrobial and Cytotoxic Compounds from *Garcinia cantleyana* and *G. nigrolineata*" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

MAWARDI RAHMANI, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

GWENDOLINE EE CHENG LIN, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

KHOZIRAH SHAARI, PhD

Associate Professor
Institute of Bioscience
Universiti Putra Malaysia
(Internal Examiner)

MUHAMMAD IQBAL CHOUDHARY, PhD

Professor
H. E. J. Research Institute of Chemistry
University of Karachi
Karachi
(External Examiner)

GULAM RUSUL RAHMAT ALI, PhD
Professor/Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 22 NOV 2005

The thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee are as follows:

MOHD. NORDIN HJ. LAJIS, PhD

Professor
Institute of Bioscience
Universiti Putra Malaysia
(Chairman)

ABDUL MANAF ALI, PhD

Professor
Faculty of Food Science and Biotechnology
Universiti Putra Malaysia
(Member)

DAUD A. ISRAF ALI, PhD

Associate Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Member)

AHMAD SAZALI, PhD

Professor
Institute of Science
Universiti Teknologi MARA
(Member)

AINI IDERIS, PhD

Professor/ Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 08 DEC 2005

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations, which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any degree at UPM or other institutions.

5.79	¹³ C-NMR spectrum of Cantleyanone F (314) in CDCl ₃	184
5.80	DEPT spectrum of Cantleyanone F (314) in CDCl ₃	185
5.81	COSY spectrum of Cantleyanone F (314) in CDCl ₃	186
5.82	NOESY spectrum of Cantleyanone F (314) in CDCl ₃	187
5.83	HMQC spectrum of Cantleyanone F (314) in CDCl ₃	188
5.84	HMBC spectrum of Cantleyanone F (314) in CDCl ₃	189

5.85	Gaudichaudion H (233)	192
5.87	EIMS Spectrum of Gaudichaudion H (233)	194
5.88	UV Spectrum of Gaudichaudion H (233)	194
5.89	IR Spectrum of Gaudichaudion H (233)	194
5.90	^1H -NMR spectrum of Gaudichaudion H (233) in CDCl_3	195
5.91	^{13}C -NMR spectrum Gaudichaudion H (233) in CDCl_3	196
5.92	DEPT spectrum of Gaudichaudion H (233) in CDCl_3	197
5.93	COSY spectrum of Gaudichaudion H (233) in CDCl_3	198
5.94	HMQC spectrum of Gaudichaudion H (233) in CDCl_3	199
5.95	HMBC spectrum of Gaudichaudion H (233) in CDCl_3	200
5.96	Cantleyanaxanthone (309)	204
5.97	Diagnostic 2J and 3J correlations in the HMBC Cantleyanaxanthone (309)	204
5.98	EI MS Spectrum of Cantleyanaxanthone (309)	205
5.99	UV Spectrum of Cantleyanaxanthone (309)	205
5.100	IR Spectrum of Cantleyanaxanthone (309)	205
5.101	^1H -NMR spectrum Cantleyanaxanthone (309)	206
5.102	^{13}C -NMR spectrum of Cantleyanaxanthone (309) in CDCl_3	207
5.103	DEPT spectrum of Cantleyanaxanthone (309) in CDCl_3	208
5.104	COSY spectrum of Cantleyanaxanthone (309) in CDCl_3	209
5.105	HMQC spectrum of Cantleyanaxanthone (309) in CDCl_3	210
5.106	HMBC spectrum of Cantleyanaxanthone (309) in CDCl_3	211
5.107	Garbogiol (308)	214
5.108	Diagnostic 2J and 3J correlations in the HMBC garbogiol	215
5.109	EI MS Spectrum of garbogiol (308)	215
5.110	UV Spectrum of garbogiol (308)	215
5.111	IR Spectrum of garbogiol (308)	215
5.112	^1H -NMR spectrum garbogiol (308)	216
5.113	^{13}C -NMR spectrum of garbogiol (308)	217
5.114	DEPT spectrum of garbogiol (308) in CDCl_3	218
5.115	COSY spectrum of garbogiol (308) in CDCl_3	219
5.116	HMQC spectrum of garbogiol (308) in CDCl_3	220
5.117	HMBC spectrum of garbogiol (308) in CDCl_3	221

5.118	2D NMR for macranthol (310)	224
5.119	Macranthol (310)	225
5.120	EI MS Spectrum of macranthol (310)	226
5.121	UV Spectrum of macranthol (310)	226
5.122	IR Spectrum of macranthol (310)	226
5.123	^1H -NMR spectrum macranthol (310) in acetone- d_6	227
5.124	^{13}C -NMR spectrum of macranthol (310) in acetone- d_6	228
5.125	DEPT spectrum of macranthol (310) in acetone- d_6	229
5.126	COSY spectrum of macranthol (310) in acetone- d_6	230
5.127	NOESY spectrum of macranthol (310) in acetone- d_6	231
5.128	HMQC spectrum of macranthol (310) in acetone- d_6	232
5.129	HMBC spectrum of macranthol (310) in acetone- d_6	233
5.130	glutin-5-en-3 β -ol (304)	236
5.131	EI MS Spectrum of glutin-5-en-3 β -ol (304)	237
5.132	IR Spectrum of glutin-5-en-3 β -ol (304)	237
5.133	^1H -NMR spectrum glutin-5-en-3 β -ol (304) in CDCl_3	238
5.134	^{13}C -NMR spectrum of glutin-5-en-3 β -ol (304) in CDCl_3	239
5.135	DEPT spectrum of glutin-5-en-3 β -ol (304) in CDCl_3	240
5.136	COSY spectrum of glutin-5-en-3 β -ol (304) in CDCl_3	241
5.137	HMQC spectrum of glutin-5-en-3 β -ol (304) in CDCl_3	242
5.138	HMBC spectrum of glutin-5-en-3 β -ol (304) in CDCl_3	243
5.139	methyl putranjivate (315)	246
5.140	EI MS Spectrum of methyl putranjivate (315)	247
5.141	UV Spectrum of methyl putranjivate (315)	247
5.142	IR Spectrum of methyl putranjivate (315)	247
5.123	^1H -NMR spectrum of methyl putranjivate (315) in CDCl_3	248

5.144	^{13}C -NMR spectrum of methyl putranjivate (315) in CDCl_3	249
5.145	DEPT spectrum of methyl putranjivate (315) in CDCl_3	250
5.146	COSY spectrum of methyl putranjivate (315) in CDCl_3	251
5.147	HMQC spectrum of methyl putranjivate (315) in CDCl_3	252
5.148	HMBC spectrum of methyl putranjivate (315) in CDCl_3	253
5.149	Friedelin (316)	256
5.150	EI MS Spectrum of Friedelin (316)	257
5.151	UV Spectrum of Friedelin (316)	257
5.152	IR Spectrum of Friedelin (316)	257
5.153	^1H -NMR spectrum of Friedelin (316) in CDCl_3	258
5.154	^{13}C -NMR spectrum of Friedelin (316) in CDCl_3	259
5.158	EI MS of stigmasterol and β -sitosterol (317)	261
5.159	IR spectrum of stigmasterol and β -sitosterol (317)	261
5.160	Structure of stigmasterol and β -sitosterol (317) ($\text{R}=\text{R}_1 = \beta$ - sitosterol, $\text{R}=\text{R}_2= \text{stigmasterol}$)	261
5.161	^1H -NMR spectrum of stigmasterol and β -sitosterol (317) in CDCl_3	262

LIST OF SCHEMES

Scheme	Page
2.1 Proposed biosynthesis of xanthonenes in higher plants	53
2.2 Proposed biosynthesis of xanthonenes in higher plants involving spiranic intermediates	54
2.3 Proposed biosynthesis of caged unit 263 by a) Kartha and b) Ollis	56
3.1 Flowchart for column chromatography of crude chloroform extract of <i>G. cantleyana</i> leaves 1 st collection	73
3.2 Flowchart for column chromatography of crude chloroform extract of <i>G. cantleyana</i> leaves 2 nd collection	80
3.3 Flowchart for column chromatography of crude chloroform extract of <i>G. cantleyana</i> Trunk bark	88
3.4 Flowchart for column chromatography of crude ethyl acetate extract of <i>G. nigrolineata</i> leaves	94
5.1 Plausible biogenetic pathways to cantleyanone A, B, and G	268
5.2 Plausible biogenetic pathways to cantleyanone E, D, and F	269

LIST OF ABBREVIATIONS

δ	Chemical shift in ppm
$^{\circ}\text{C}$	Degree in Celsius
$[\alpha]_{\text{D}}$	Specific rotation at sodium D-line
bp	Boiling point
br	Broad
BuOH	Butanol
^{13}C	Carbon-13
d	Doublet
dd	Doublet of doublet
ddd	Doublet of doublet of doublet
DEPT	Distortionless Enhancement by Polarization Transfer
DMSO	Dimethylsulfoxide
EtOAc	Ethyl acetate
eV	Electron volt
FTIR	Fourier Transform Infra-Red
GC-MS	Gas Chromatography-Mass Spectrometry
^1H	Proton
gHMBC	Gradient Heteronuclear Multiple Bond Correlation
gHSQC	Gradient Heteronuclear Single-Quantum Coherence
gCOSY	Gradient Correlation Spectroscopy
HREIMS	High Resolution Electron Impact Mass Spectrum
EIMS	Electron Impact Mass Spectrum
ESIMS	Electro-Spray Ionization Mass Spectrum
Hz	Hertz
IR	Infrared
J	Coupling in Hz
Lit.	Literature
m	Multiplet
m/z	Mass per charge
MeOH	Methanol
MHz	MegaHertz
m.p.	Melting point
